

meccanocar 411 00 14900-2792-Additive for diesel fuel

PROPERTIES:

The Meccanocar additive for diesel fuel was especially studied for diesel engines. Besides enhancing the flow of diesel, it is efficient in dissolving sediments in the injectors, on the valves and on the pistons. It protects from corrosion and does not pollute.

It thus guarantees safe and perfect running function of diesel engines in time.

For perfect running function, use a container of 250 ml. every 2.000 km.

SPECIFICATIONS OF DATA AND DESCRIPTIONS:

Mixture of solvents and additives specifically suitable for enhancing the performance of diesel engines.

- Appearance: yellow liquid, clear and transparent.
- Active substance: 100%.
- Water content: less than 0,01%.
- Solubility: soluble in all proportions in diesel or solvents. Insoluble in water.

WARNINGS:

Read and observe the safety warnings appearing on the container label.

For information relative to handling, transportation, etc., refer to the Safety Sheet concerning the product under issue.

The information appearing in this documentation refers to knowledge of the product upon the compilation date appearing above. In consideration of the many possible uses, and possible interference of elements that do not depend on the producer, it is not possible to assume any responsibility in merit of the descriptions shown.
