The full wording of hazard (H) phrases is given in section 16 of the sheet.

SECTION 4. First aid measures

4.1. Description of first aid measures

EYES: Remove contact lenses, if present. Wash immediately with plenty of water for at least 15 minutes, opening the eyelids fully. If problem persists,

4110016470 - PRIMER FOR SEALANTS

Revision nr. 2

Dated 25/10/2023 Printed on 07/05/2024

Page n. 4/26

Replaced revision:1 (Dated: 10/08/2020)

seek medical advice.

SKIN: Remove contaminated clothing. Rinse skin with a shower immediately. Get medical advice/attention immediately. Wash contaminated clothing before using it again.

INHALATION: Remove to open air. If the subject stops breathing, administer artificial respiration. Get medical advice/attention immediately. INGESTION: Get medical advice/attention immediately. Do not induce vomiting. Do not administer anything not explicitly authorised by a doctor.

4.2. Most important symptoms and effects, both acute and delayed

Specific information on symptoms and effects caused by the product are unknown.

4.3. Indication of any immediate medical attention and special treatment needed

Information not available

SECTION 5. Firefighting measures

5.1. Extinguishing media

SUITABLE EXTINGUISHING EQUIPMENT

Extinguishing substances are: carbon dioxide, foam, chemical powder. For product loss or leakage that has not caught fire, water spray can be used to disperse flammable vapours and protect those trying to stem the leak.

UNSUITABLE EXTINGUISHING EQUIPMENT

Do not use jets of water. Water is not effective for putting out fires but can be used to cool containers exposed to flames to prevent explosions.

5.2. Special hazards arising from the substance or mixture

HAZARDS CAUSED BY EXPOSURE IN THE EVENT OF FIRE Excess pressure may form in containers exposed to fire at a risk of explosion. Do not breathe combustion products.

5.3. Advice for firefighters

GENERAL INFORMATION

Use jets of water to cool the containers to prevent product decomposition and the development of substances potentially hazardous for health. Always wear full fire prevention gear. Collect extinguishing water to prevent it from draining into the sewer system. Dispose of contaminated water used for extinction and the remains of the fire according to applicable regulations.

SPECIAL PROTECTIVE EQUIPMENT FOR FIRE-FIGHTERS

Normal fire fighting clothing i.e. fire kit (BS EN 469), gloves (BS EN 659) and boots (HO specification A29 and A30) in combination with self-contained open circuit positive pressure compressed air breathing apparatus (BS EN 137).

SECTION 6. Accidental release measures

6.1. Personal precautions, protective equipment and emergency procedures

Block the leakage if there is no hazard.

Wear suitable protective equipment (including personal protective equipment referred to under Section 8 of the safety data sheet) to prevent any contamination of skin, eyes and personal clothing. These indications apply for both processing staff and those involved in emergency procedures.

Send away individuals who are not suitably equipped. Use explosion-proof equipment. Eliminate all sources of ignition (cigarettes, flames, sparks, etc.) from the leakage site.

6.2. Environmental precautions

The product must not penetrate into the sewer system or come into contact with surface water or ground water.

4110016470 - PRIMER FOR SEALANTS

Revision nr. 2 Dated 25/10/2023 Printed on 07/05/2024

Page n. 5/26

Replaced revision:1 (Dated: 10/08/2020)

6.3. Methods and material for containment and cleaning up

Collect the leaked product into a suitable container. Evaluate the compatibility of the container to be used, by checking section 10. Absorb the remainder with inert absorbent material.

Make sure the leakage site is well aired. Contaminated material should be disposed of in compliance with the provisions set forth in point 13.

6.4. Reference to other sections

Any information on personal protection and disposal is given in sections 8 and 13.

SECTION 7. Handling and storage

7.1. Precautions for safe handling

Keep away from heat, sparks and naked flames; do not smoke or use matches or lighters. Without adequate ventilation, vapours may accumulate at ground level and, if ignited, catch fire even at a distance, with the danger of backfire. Avoid bunching of electrostatic charges. When performing transfer operations involving large containers, connect to an earthing system and wear antistatic footwear. Vigorous stirring and flow through the tubes and equipment may cause the formation and accumulation of electrostatic charges. In order to avoid the risk of fires and explosions, never use compressed air when handling. Open containers with caution as they may be pressurised. Do not eat, drink or smoke during use. Avoid leakage of the product into the environment.

7.2. Conditions for safe storage, including any incompatibilities

Store only in the original container. Store the containers sealed, in a well ventilated place, away from direct sunlight. Store in a cool and well ventilated place, keep far away from sources of heat, naked flames and sparks and other sources of ignition. Keep containers away from any incompatible materials, see section 10 for details.

7.3. Specific end use(s)

Information not available

SECTION 8. Exposure controls/personal protection

8.1. Control parameters

4110016470 - PRIMER FOR SEALANTS

Revision nr. 2 Dated 25/10/2023 Printed on 07/05/2024

Page n. 9/26

Replaced revision:1 (Dated: 10/08/2020)

provide general requirements and lists of glove types.

ETHYL ACETATE

Butyl rubber gloves (opening times> 480 minutes), Neoprene ™ rubber, nitrile rubber (opening times up to 480 minutes).

N-[3-(TRIMETHOXYSILYL)PROPYL]ETHYLENEDIAMINE

Chemical protective gloves or gloves must be worn and removed correctly to avoid skin contamination: Silver shield (TM). 4H (TM). Regarding the glove breakthrough time, contact the supplier of the chemical protective glove.

CYCLOHEXANONE

Respiratory protection:

Respiratory protection suitable for lower concentrations or short-term effect: Filter for gases / vapors of organic compounds (boiling point> 65 ° C, eg. EN 14387 Type A)

Hand protection:

Chemical resistant protective gloves (EN 374)

Materials also suitable for direct and prolonged contact (Recommended: Protection index 6, corresponding to> 480 minutes of permeation time according to EN 374):

butyl rubber (butyl) - coating thickness 0.7 mm

Suitable materials short-term contact and / or splashes (recommended: at least protection index 2, corresponding> 30 minutes of breakthrough time according to EN 374)

nitrile rubber (NBR) - Coating thickness 0.4 mm

fluoroelastomer (FKM) - coating thickness 0.7 mm

The manufacturer's instructions for use must be observed due to the great diversity of types.

Eye protection:

Airtight protective goggles (splash goggles) (e.g. EN 166) Body protection:

Body protection should be chosen based on activity and possible exposure, eg. apron, protective boots, chemical protective suit (according to EN 14605 in case of splashes or EN ISO 13982 in case of dust).

VOC (Directive 2010/75/EU)	99,90 % - 729,29 g/litre	
SECTION 10. Stability and re	activity	
10.1. Reactivity		

There are no particular risks of reaction with other substances in normal conditions of use.

ETHYL ACETATE

It slowly decomposes to acetic acid and ethanol due to the action of light, air and water. Stable under normal conditions. Upon storage, it is slowly decomposed by water.

CYCLOHEXANONE

Attacks various types of plastic materials.

It can condense under the effect of heat giving resinous compounds. Reacts with oxidizing agents.

10.2. Chemical stability

The product is stable in normal conditions of use and storage.

10.3. Possibility of hazardous reactions

The vapours may also form explosive mixtures with the air.

ETHYL ACETATE

Risk of explosion on contact with: alkaline metals, hydrides, oleum. May react violently with: fluorine, strong oxidising agents, chlorosulphuric acid, potassium tert-butoxide. Forms explosive mixtures with: air.

CYCLOHEXANONE

4110016470 - PRIMER FOR SEALANTS

Revision nr. 2

Dated 25/10/2023 Printed on 07/05/2024

Page n. 11/26

Replaced revision:1 (Dated: 10/08/2020)

Risk of explosion on contact with: hydrogen peroxide, nitric acid, heat, mineral acids. May react violently with: oxidising agents. Forms explosive mixtures with: air.

10.4. Conditions to avoid

Avoid overheating. Avoid bunching of electrostatic charges. Avoid all sources of ignition.

HYDROCARBONS, C7, N-ALCANS, ISOALKANS, CYCLES

Avoid heat, sparks, open flames and other sources of ignition.

ETHYL ACETATE

Avoid exposure to: light,sources of heat,naked flames.

Ignition sources.

TITANIUM TETRABUTANOLATE

Avoid all possible sources of ignition (sparks or flames). Do not pressurize, cut, weld, braze, weld, drill, grind or expose containers to heat or sources of ignition.

CYCLOHEXANONE

Avoid exposure to: sources of heat, naked flames.

Avoid sources of ignition. Avoid extreme heat.

10.5. Incompatible materials

HYDROCARBONS, C7, N-ALCANS, ISOALKANS, CYCLES

Strong oxidants.

ETHYL ACETATE

Incompatible with: acids,bases,strong oxidants,aluminium,nitrates,chlorosulphuric acid.Incompatible materials: plastic materials.

Oxidizing agents, acids, alkalis.

TITANIUM TETRABUTANOLATE

Reactive or incompatible with the following materials: oxidizing materials and acids. Hydrolyzes in water to form n-butanol and titanium dioxide.

N-[3-(TRIMETHOXYSILYL)PROPYL]ETHYLENEDIAMINE

4110016470 - PRIMER FOR SEALANTS

Revision nr. 2

Dated 25/10/2023 Printed on 07/05/2024

Page n. 12/26

Replaced revision:1 (Dated: 10/08/2020)

Strong oxidizing agents

CYCLOHEXANONE

Strong oxidizing agents, acids, bases

10.6. Hazardous decomposition products

In the event of thermal decomposition or fire, gases and vapours that are potentially dangerous to health may be released.

ETHYL ACETATE

Carbon oxides on combustion.

TITANIUM TETRABUTANOLATE

When heated to decomposition, hydrocarbons, carbon monoxide and carbon dioxide can be produced.

CYCLOHEXANONE

Incomplete combustion results in the formation of toxic gases, containing mainly carbon monoxide and carbon dioxide.

SECTION 11. Toxicological information

In the absence of experimental data for the product itself, health hazards are evaluated according to the properties of the substances it contains, using the criteria specified in the applicable regulation for classification. It is therefore necessary to take into account the concentration of the individual hazardous substances indicated in section 3, to evaluate the toxicological effects of exposure to the product.

11.1. Information on hazard classes as defined in Regulation (EC) No 1272/2008

Metabolism, toxicokinetics, mechanism of action and other information

On the basis of available data, the product does not contain any PBT or vPvB in percentage ≥ than 0,1%.

12.6. Endocrine disrupting properties

Based on the available data, the product does not contain substances listed in the main European lists of potential or suspected endocrine disruptors with environmental effects under evaluation.

12.7. Other adverse effects

Information not available

SECTION 13. Disposal considerations

13.1. Waste treatment methods

Reuse, when possible. Product residues should be considered special hazardous waste. The hazard level of waste containing this product should be evaluated according to applicable regulations.

Disposal must be performed through an authorised waste management firm, in compliance with national and local regulations.

Waste transportation may be subject to ADR restrictions.

CONTAMINATED PACKAGING

Contaminated packaging must be recovered or disposed of in compliance with national waste management regulations.

HYDROCARBONS, C7, N-ALCANS, ISOALKANS, CYCLES

The product is suitable for combustion in a closed controlled burner for the value or disposal of the fuel by supervised incineration at very high temperatures to prevent the formation of undesirable combustion products.

ETHYL ACETATE

Dispose of as hazardous waste. Recover or recycle if possible. Otherwise incineration. Dispose according to local regulations. Disposal of the container: empty the container completely. Empty containers may contain highly flammable residues. Do not cut, grind, puncture, weld or dispose of containers unless adequate precautions have been taken against this hazard. Do not remove the container labels until they are cleaned. Send

4110016470 - PRIMER FOR SEALANTS

Revision nr. 2

to drum recovery or metal recovery.

TITANIUM TETRABUTANOLATE

Waste should only be disposed of via a licensed waste contractor. The European Waste Catalog (EWC) and the European Waste List (EWL) are a harmonized list of waste. Waste materials must be classified before final disposal with EWC codes. Waste and empty containers must be treated according to their classification and properties, referring to local and national regulations on waste management. Waste management options: landfill disposal for non-hazardous or hazardous waste (Council Directive on landfills of waste 99/31 / EU and Council Decision establishing criteria and procedures for the acceptance of waste in landfills 2003/33 / EU) or dispose of by incinerating hazardous waste.

The generation of waste should be avoided or minimized wherever possible. Dispose of excess and non-recyclable products through a licensed waste disposal contractor. Disposal of this product, solutions and any by-products must always comply with the requirements of environmental protection and waste legislation and any local waste management legislation.

Waste codes should be assigned by the user, preferably in discussion with the waste disposal authorities. All wastes containing residues of the substance or its hazardous degradation products must be classified as hazardous waste.

All waste containing residues of the substance or its hazardous degradation products must be disposed of as hazardous waste in the authorized hazardous waste incineration plants, managed according to Directive 2008/98 / EC on waste, Directive 2000/76 / EC on incineration of waste and Best available techniques for waste incineration described in the respective BREF of August 2006. Contaminated packaging: Contaminated packaging must be emptied as much as possible and disposed of as hazardous waste in incineration plants in

Contaminated packaging: Contaminated packaging must be emptied as much as possible and disposed of as hazardous waste in incineration plants in accordance with Directive 2000/76 / EC. Clean packaging material must be subject to waste management schemes (recovery, recycling, reuse) according to local waste management regulations.

The substance and its container must be disposed of safely. Be careful when handling empty containers that have not been cleaned or rinsed. Empty containers or liners can retain some product residues. Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers.

N-[3-(TRIMETHOXYSILYL)PROPYL]ETHYLENEDIAMINE

Dispose according to local regulations. According to the European Waste Catalog, the waste codes are not specific to the product, but specific to the application. Waste codes should be assigned by the user, preferably in discussion with the waste disposal authorities.

Substances subject to the Rotterdam Convention:

None

Substances subject to the Stockholm Convention:

None

Healthcare controls

Workers exposed to this chemical agent must not undergo health checks, provided that available risk-assessment data prove that the risks related to the workers' health and safety are modest and that the 98/24/EC directive is respected.

15.2. Chemical safety assessment

A chemical safety assessment has not been performed for the preparation/for the substances indicated in section 3.

SECTION 16. Other information

Text of hazard (H) indications mentioned in section 2-3 of the sheet:

Flam. Liq. 2	Flammable liquid, category 2
Flam. Liq. 3	Flammable liquid, category 3
Acute Tox. 4	Acute toxicity, category 4
Asp. Tox. 1	Aspiration hazard, category 1
Eye Dam. 1	Serious eye damage, category 1
Eye Irrit. 2	Eye irritation, category 2
Skin Irrit. 2	Skin irritation, category 2
STOT SE 3	Specific target organ toxicity - single exposure, category 3
Skin Sens. 1	Skin sensitization, category 1
Aquatic Chronic 2	Hazardous to the aquatic environment, chronic toxicity, category 2
H225	Highly flammable liquid and vapour.
H226	Flammable liquid and vapour.
H302	Harmful if swallowed.
H312	Harmful in contact with skin.
H332	Harmful if inhaled.
H304	May be fatal if swallowed and enters airways.
H318	Causes serious eye damage.
H319	Causes serious eye irritation.
H315	Causes skin irritation.
H335	May cause respiratory irritation.
H317	May cause an allergic skin reaction.
H336	May cause drowsiness or dizziness.
H411	Toxic to aquatic life with long lasting effects.

Note for users:

The information contained in the present sheet are based on our own knowledge on the date of the last version. Users must verify the suitability and thoroughness of provided information according to each specific use of the product.

This document must not be regarded as a guarantee on any specific product property. The use of this product is not subject to our direct control; therefore, users must, under their own responsibility, comply with the current health and safety laws and regulations. The producer is relieved from any liability arising from improper uses.

Provide appointed staff with adequate training on how to use chemical products.

CALCULATION METHODS FOR CLASSIFICATION

Chemical and physical hazards: Product classification derives from criteria established by the CLP Regulation, Annex I, Part 2. The data for evaluation of chemical-physical properties are reported in section 9.

Health hazards: Product classification is based on calculation methods as per Annex I of CLP, Part 3, unless determined otherwise in Section 11. Environmental hazards: Product classification is based on calculation methods as per Annex I of CLP, Part 4, unless determined otherwise in Section 12.
